

## Community and Youth Education Programs

Friends of the St. Clair River

### Pollution Solutions

3<sup>rd</sup> – 7<sup>th</sup> grades

Pollution Solutions is a hands-on classroom presentation that helps students relate the water cycle and pollution sources to their daily lives. Students “pollute” a model of a their community, watch the effects of a rainstorm and then discuss water quality problems and solutions. Connections are made between the health of the environment, land use, and human impacts on the land.

### Water & the Urban Environment

8<sup>th</sup> – 12<sup>th</sup>

Water and the Urban Environment is designed for an older audience that can understand more complex issues involving water such as green infrastructure, watershed management, and storm water pollution controls. It starts with a slide show about our local waterways and sources of pollution. Environmental concepts are brought to life using a model of a typical community. We discuss current pollution problems and how solutions to protecting our environment.

- ★ Request a free set of watershed maps or a wall-size watershed map for your classroom
- ★ Presentations are customized to address classroom curriculum
- ★ Pollution Solutions compliments environmental, geography, and science curriculum standards
- ★ Funding for these free programs is provided in full by Friends of the St. Clair River.
